Simulated 4 class dataset, unweighted Robinson-Foulds distance

Difference in Log-likelihood Between 1 and 2 classes

——	mean simulated difference = 8.58287679
- - -	95th centile = 15.878725
——	real data difference = 1877.53739
▇	simulated distribution

Density

$\Delta \ln \ell$
